Applicant's election without traverse of Group I (claims 1-9 and 12-12 in the reply filed on 06/07/07 is acknowledged. Also, applicant's election of SPECIES Ag/C/graphite and carbitol acetate is noted.

Note that the election of solvent species (carbitol acetate) has been withdrawn.

Claims 3, 4, and 10 are withdrawn from consideration.

Applicant should amend claim 8 to utilize proper Markush language "selected from the group consisting of".

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9 provides for the use of a composition, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Art Unit: 1751

Claim 9 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 2, 5-9, 11 and 12 are rejected on the ground of nonstatutory obviousness-type double patenting as being

Art Unit: 1751

unpatentable over claims 1-7 of U.S. Patent No. 6,939,484. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the instant claims and the claims of 6,939,484 are drawn to conductive compositions comprising the same required PVDF/HFP resin. The instant claims are merely broader in scope and fully encompass the "silver powder" recited in U.S. 6,939,484.

REQUEST FOR INFORMATION

Applicant and the assignee of this application are REQUESTED to provide the following information that the examiner has determined is reasonably necessary to the examination of this application:

At page 8 of the instant specification, applicant states:

Key for Polymer resins used in Examples

Experimental VDF/HFP copolymer: Available from Solvay Solexis -
Thorofare, NJ; Copolymer of PVDF/HFP; Melt viscosity 0.45 kP; Melt
temperature 94°C

Are applicants aware of any commercially available PVDF/HFP product(s) (by trade name or otherwise) which meet the instant requirements of claim 1 (specifically melt viscosity and DSC melt temperature)?

The information is required to identify any products and services embodying the disclosed subject matter of claim 1

Art Unit: 1751

(PVDF/HFP) and identify the properties of any similar products and services found in the prior art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Kopec whose telephone number is (571) 272-1319. The examiner can normally be reached on Monday - Friday from 9:30 AM to 6:00 PM.
